

NEWS RELEASE

Joe Cook Named Chief Engineer

SAN DIEGO, September 19, 2007 – SPARTA Composite Products, a business unit of SPARTA, Inc., has announced that Joe Cook has been promoted to the position of 'Chief Engineer.' This promotion is commensurate with an organization change that will be implemented in early 2008. Joe will continue to lead the engineering organization at SPARTA CPO, but he will move up a notch. We will be dividing up the organization into Development Programs and Production Programs, and Joe will run both of these new departments. Joe will have a Production Programs Engineering Manager reporting to him and, at least for the near term, he will continue to personally be in charge of the engineering for all development programs.

Joe Cook also won the prestigious "Rocket Scientist Award" earlier this year. This coveted award is given out to one employee in the corporation each year for excellence in technical achievement. Joe was selected from many other candidates within the corporation of over 1,200 employees.

"Joe is an asset to SPARTA CPO and is a valuable member of the management team. We are lucky to have a person of Joe's caliber to continue to lead our technical and programmatic success and to keep our customers "Raving Fans" of SPARTA CPO," said Paul Oppenheim, SPARTA Vice President and General Manager

SPARTA Composite Products is a business unit of SPARTA, Inc. and is an industry leader in high-volume production of composite products and sub-assemblies for aerospace and commercial systems. The company's product areas include aircraft engine components, UAV components, aircraft components, munition components and missile products. SPARTA specializes in compression molding, RTM and hand layup/autoclave cure. SPARTA, Inc. is a systems engineering and advanced technology company headquartered in Lake Forest, CA. The corporation is dedicated to serving our nation's needs within our core business areas of strategic defense and offense systems, tactical weapons systems, space systems, and information systems.
